PVC GLOVES VERTEK GAUNTLET STYLE

GLOVE DESCRIPTION

Tough flexible PVC coating with additional granular coating on hand portion to confer excellent grip in wet and dry applications. Increased thickness gives additional wear and abrasion resistance. Both cotton interlock and brushed jersey linings are available with this style. Ideally suited for general handling in most factory uses and may be used in general chemical handling situations. Not recommended for use with concentrated corrosive chemicals. Flar ed gauntlet for ease of removal. Actifresh or Santized treated to provide some protection against organisms, which give bad odour and cross infection. Protection levels are measured from double dipped area of glove palm.

The gloves shall not be worn when there is a risk of entanglement with moving parts of machine. LINER

100 % Cotton Washed Knitted Brushed Jersey (J) for Style V327, V330, V335, V340, V345 100 % Cotton Washed Knitted Interlock (I) for Style V327T, V335T, V340T, V345T

CHEMICAL DATA
Test EN-374-3 measures the BREAK
THROUGH TIME (B.T.T) for a
chemical to permeate through a glove
material.

Chemicals	B.T.T (Min)	Class	
n-Heptane (J)	34 minutes	2	
40% Sodium Hydroxide (K)	> 480 minutes	6	
96% Sulphuric Acid (L)	101 minutes	3	

Breakthrough time is defined in EN 374 Part III as the rate of permeation of a chemical through the glove palm sample, which is equivalent to I micro gram (milliomh of one gram) per square centimeter per minute (lugm/cm/min).

Lugaruem main).

EC Type examination for Directive 89/686/EEC carried out by
Notified Body No. 0120, SGS United Kingdom Ltd. Unit 202b,
Worle Parkway, Weston-super-Mare, B822 6WA, UK.
Gauntlets are sampled and tested for leakage in accordance with Annex-A of
EN 374 Part 2 and EN 374 Part 2 section 5.2 respectively and the results at
performance level 3 and inspection level GI are classified as Acceptable
Quality Level (AQL) = 0.65

Dexterity performance level is 5 in accordance with EN 420:2003.

TESTED IN ACCORDANCE WITH EN388: 2003 & EN374: 2003.

MARKING ON GLOVE

UC), VERTEK. model number, size, Actifresh, CE mark, Notified body number & relevant pictograms with performance levels.

ELECTROSTATIC PROPERTIES

Test Result: Gloves tested to BS EN 1149-3:2004, the mean value fro the Shielding Factor (S) is 0.05 and Half Decay Time, 150 (Sec.) is 0.07, which means the gloves complies with Induction Decay Test and the results meets the requirements specified in EN 1149-5:2008.

Atmosphere of Testing: The sample was confidenced and tested at 23 + 17 C and 25 + 1/5 % t.h. Gloves Area Tested: A specimen of area 300mm X 300 mm is used for testing.

Test Method/Extrode Used: Induction Decay Test and field electrode used (A polished stainless steeldies, 70 + 1 mm diameter)

Voltage Applied: 1200 + 5 00 v step voltage on the field electrode.

Wazning: The person werning the electrostatic dissipative protective clothing shall be earthed. The resistance between the person and the earth shall be less than 110 c, e.g. by warning adequate fortware in the strainer of the step of the strainer of

PAL CHOVES ATTRA

CLEANING/MAINTENANCE

CLEANING/MAINTENANCE

Both new and used gloves should be thoroughly inspected, especially after cheaning treatment, before being worn to ensure no damage is present. Gloves should not be left in contaminated condition if ne-use is intended in which case gloves should be cleaned as fir as possible, provided no serious hazard exists, before removal from hands. Excess comminant should first be removed and the glovers may be decontaminated with mild detergent solution then rinsed with clean water and dried ideally with some air movement. When contaminant is not removable or presents a potential hazard it is ad visable to ease left and right gloves off alternately using the gloved hands on that the gloves are removed without the contaminant contacting bare hands.

STORAGE

Ideally stored in dry conditions in the original package.

OBSOLESCENCE

When stored properly, will not suffer changes in the mechanical properties from the date of manufacture. Service life cannot be specified and depends on application and responsibility of user to ascertain suitability of the glove for its intended use.

GENERAL

GENERAL

Their products are manufactured under a Quality System, which has been registered and meets the requirements of 180 9001

The manufacture was examined under the system for ensuring EC Quality of Production by means or monitoring (Council Directive \$9/686 EEC ARTICLE 118) by Nesified Body — 580 United Kingdom Limited Northfied Body humber 0120. The models referred to are designed to accommodate the basic safety requirements and standards laid down in EU Council Directive for Personal Protective Equipment Amert III and EN 420: 2003 FEN 388: 2003 FEN 374: 2003 respectively.

None of the raw materials or processes used in the manufacture of these products is known to have any harmful effect on the wearer.

EC Type Examination carried out by: SGS United Kingdom Ltd., 202B Worle Parkway, Weston-Super-Mare, BS22 6WA, United Kingdom. Notified Body No: 0120

NOTE

NOTE
The information contained herein is intended to assist the wearer in selection of Personal Protective Equipment. The results of physical and where appropriate to hemical tests should also help in glove selection. However it must be understood that setual conditions of use cannot be simulated and it is the responsibility of the user not the manufacturer to determine the glove suitability for the intended use.
